(Revised: January 2025)

Scope of the journal

South African Journal of Animal Science

(Official Journal of the South African Society for Animal Science)

ISSN 2221-4062 (online)

The South African Journal of Animal Science is an open access, peer-reviewed journal for the publication of original scientific articles and invited reviews in the field of animal science. The journal publishes reports of research dealing with the production of farmed animal species (cattle, sheep, goats, pigs, horses, poultry and ostriches), as well as pertinent aspects of research on aquatic and wildlife species. Disciplines covered include nutrition, genetics, physiology, and production systems. Systematic research on animal products, behaviour, and welfare are also invited. Rigorous testing of well-specified hypotheses is expected.

Publication information

The South African Journal of Animal Science is published electronically at <http://www.sasas.co.za/journals>. One volume will be published per year, consisting of 12 issues, published at monthly intervals. Accepted articles will be published as soon as the publication fee has been paid and the copy-ready version has been approved by the submitting author. Details of requirements for different categories of manuscripts and of the peer-review process are given in the *Instructions to authors*, which may be downloaded from the website given above. Prospective authors should adhere strictly to the guidelines detailed in the *Instructions to authors*. Manuscripts that are not written with proper English grammar and syntax or that do not fully comply with the style and format of the journal will not be accepted for review.

The submission process is handled by an online journal management system to facilitate the submission and review process (<http://journals.sasas.co.za/>). In all cases, submissions should represent original contributions to current scientific knowledge of the principles, and of the applications of principles, governing the functioning of animals and their relationship to the social or physical environment.
